If you note some conversion errors or another stuff please email me at or, better, on the G+ page. The three main ones are , ISO 3602 , and ISO 3602 Strict. Keystroke combinations that differ from those in the romanization tables are highlighted in red.

Japanese Online Keyboard: Kanji, Hiragana, Katakana • LEXILOGOS

Later, in the early 20th century, some scholars devised syllabary systems with characters derived from Latin rather like the that were even less popular since they were not based on any historical use of the Latin script. For example, 's book shows the older kw- pronunciation; in modern Hepburn romanization, this would be written lit.

Therefore, almost all Japanese are able to read and write Japanese using rōmaji, although it is extremely rare in Japan to use this method to write Japanese except as an input tool on a computer or for special purposes like in some logo design , and most Japanese are more comfortable reading kanji and kana. It was standardized in the United States as American National Standard System for the Romanization of Japanese Modified Hepburn , but that status was abolished on October 6, 1994.

Romanization of Japanese

This system is widely used in Japan and among foreign students and academics. Since it does not have any of the other systems' advantages for non-native speakers, and the Japanese already have a writing system for their language, JSL is not widely used outside the educational environment.
