. Laboratory characterization of representative soil profiles are also being continued.

Ch 12

} } We will discuss these factors in more detail in a later module. I-Tex copies of each field sheetplus interpretation sheets for each soil series are made available at the end of each field season in each area. Experience has shown that no useful generalizations about single characteristics can be made for all soils.

Soil Genesis and Classification

Some of the soils like peat and organic silts are so compressible that they cannot be used as foundation materials, whereas others like sand and

gravels are excellent foundation materials for most of the construction projects. These soils are very common and a very large number of engineering structures are built on them.
