Selection of the simulator would preferably involve the highest level D simulator, but these are not easily accessible and

expensive to use. Reports from the Department of Psychology Supplement series no.

## Welcome to Euramec

Fourthly, the duct can shield the noise generated by propeller and insure the safety of propeller when it works. Euramec designs, develops and manufactures professional flight training devices.

## Simulation Evaluation of Transition and Hover Flying Qualities of a Mixed

The lack of visual cues in cloud and the total immersion in the task at hand appear to have contributed to the lack of sensitivity to motion in the FBS.

## Fixed

The upgrade calls for up to 40 MetaVR VRSG licenses, and two Terrain Tools licenses.

Sensitization of the acoustic startle reflex by footshock. In addition to use in Pilot Training Next, the simulators are being used extensively in the F-16 Basic Course syllabus. We report the use of a fixed-base driving simulator to study the effects of both experience on the road and PC-based

risk awareness training on younger drivers' part-task simulator driving performance in risky traffic scenarios.

Developmental Review, 26, 175— 212. A number of recent aircraft accidents have highlighted the potential effects of startle in accident causation.

The MPS Boeing 737-800 FBS can be used for the majority of the simulator hours required for Multi-crew pilot license MPL.
