Whether to have a second child or not? An integrative approach to women's reproductive decision

Women in both cohorts mentioned that stigma affected their fertility decisions.

Office of Population Research, Princeton University

In many accounts, the impact of experiencing infertility and of treatment on both their psychological and physical well-being were evident to the women themselves. Strategies for teaching students to think critically; a meta analysis. Married women in this study are referred to as ever-married, legally married or those living with their husbands in a consensual union.

Prevalence of child marriage and its impact on fertility outcomes in 34 sub

Here we introduce a framework covering three steps of reproductive decision-making—ideal family size, fertility desire and fertility intention—and test it using multi-level survey data collected from Chinese one-child mothers. The study was initiated by Heather Joshi, Denise Hawkes, Leslie Davidson, Enda McVeigh, David Barlow, Jane Denton and Judy Shakespeare. Although relationships among migrants were often brief, workers were able to rely upon their community support by turning to one another in times of need.

qualitative study of the experience of treatment for infertility among women who successfully became pregnant

United Nations tools in planning for Sustainable Development 2015:24. The insights provided by the women themselves, although limited to those who had successful treatment, may help those managing and planning the service in this area of health care to appreciate the issues from the user perspective. If they see health as important, then they can provide the money for transport.

Development of the informed health choices resources in four countries to teach primary school children to assess claims about treatment effects: a qualitative study employing a user

The part that geography and location played was also a significant one for some, in relation to where treatment was received and how that

treatment was organized. Success for them was about strength of character, persistence and an unwillingness to give up, making repeated attempts to reach their goal. United Nations Division for the Advancement of Women, editor.

Fertility decision

Co-creation and the new landscapes of design. Methods We prototyped, piloted, and user-tested resources in four settings that included Uganda, Kenya, Rwanda, and Norway. .

Office of Population Research, Princeton University

In addition, the correlation between each of the independent variables is less than 0. To get the best possible experience using our website, you should upgrade to a newer version of Internet Explorer, or use other browser alternatives.

Family dynamics, fertility choices and family policy (FAMDYN)

Timing of antenatal care for adolescent and adult pregnant women in south-eastern Tanzania. These open access resources can be viewed or downloaded at.
