## development program to enhance diversity and inclusion among biomedical faculty

First, pharmaceutical and biotechnology companies seek to invest in products that will be shown to be effective and safe; hence, compounds that enter clinical trials have been selected as being likely to succeed.

ERIC

Because conflicts of interest in various kinds of nonclinical research have been little investigated, the committee found it difficult to evaluate arguments about the extent and the consequences or the lack of consequences of investigator and institutional conflicts of interest in this sphere of research. The registration of clinical trials and the provision of key details about the trial protocol and the data analysis plan ensure that basic methods for the conduct and analysis of the findings of a study as well as the primary clinical end points to be assessed and reported are specified before the trial begins and before data are analyzed. Such safeguards could consist of a management plan that includes the involvement of a researcher without a conflict of interest in certain aspects of the research and disclosure of the conflict to coinvestigators and in presentations and publications.

## Conflicts of Interest in Biomedical Research

Tags: #Translator #Projects

## NIH stands against structural racism in biomedical research

For example, studies that have examined clinical trials involving specific clinical specialties or particular clinical problems have found an association between industry sponsorship and results that favor industry.

## NIH to fund cohort recruitment and

Whether or not the conflicts actually lead to unwarranted secrecy or biased results in particular cases, they have the potential to threaten the reputation of the research enterprise if they are not avoided or identified and managed responsibly.

#### **Protecting U.S. Biomedical Intellectual Innovation**

It has policies intended to limit bias and restrict financial conflicts of interest in its activities.

**ERIC**

Such disputes also figured in some of the incidents cited in see, e. The result could be the initiation of clinical trials based on flawed basic science. Several possible explanations can be offered for the association between industry support and results that are favorable to the sponsor.
