### Sovetské tanky v Budapeshte\_56.jpg

German crews had a better, and longer, training as they used more sophisticated mechanics and optics. Its armor is stronger. The penetrating ability of its 7. Allied bombings also played a huge part in damaging German production resulting in less armament being sent to the front.

### 1945

This is something that can affect the comparison of casualties in an operation not the final numbers. Meanwhile Western tanks like the M4 Sherman and Pz IV may have lacked sloped armor or wide tracks but they were better combat systems overall. By the way, I am no expert, just someone interested in tanks.

### Christos military and intelligence corner: WWII Myths

The new Panther tank was the first German tank to have a fully sloped hull front and sloped sides however the armor layout did not limit interior space like in the T-34. Sources are Krivosheev for the Soviet side and the official German reports available from several sources.

### 1945

On paper the Soviet types looked superior but on the field it was the US and British types that won the battles. The Ordnance Corps has examined several Soviet JS-II which were found in Germany and several Soviet T-34 tanks from both Germany and Korea.

### Tankovy udar. Sovetské tanky v boyakh. 1942

It means that comments should be short and to the point. Production numbers for other types pale by comparison. Another T-34 related myth is the Panther being a copy of it while the only thing a Panther has in common with a T-34 is that it is also a tank.

### 1945

The only way Shermans took on Panthers and Tigers was through side and rear ambushes.
