### Protected Areas Systems Review of the Indo

The protection of wildlife has a long tradition in Indian history. Making allowance for these problems, the new estimates show that rate of deforestation has, in general, increased. The adoption of a National Policy for Wildlife Conservation in 1970 and the enactment of the Wildlife Protection Act in 1972 lead to a significant growth in the protected areas network, from 5 national parks and 60 sanctuaries to 69 and 410 respectively, in 1990 Panwar, 1990.

### Protected Areas Systems Review of the Indo

Low leaf area index 1. Anthropogenic activities in selected mangrove forests: a Logged timbers on the Ébrié lagoon in Eloka-To; b Mangrove forest land reclaimed for construction in Anna; c Mangrove forest lands re-claimed for community extension in Audoin-Bégréto; d Mangrove forest lands reclaimed for agriculture in Mois bottom right. Maximum canopy height m was estimated using a clinometer.

### Priorities for conserving global species richness and endemism

A total of 1,193 wetlands, covering an area of about 3,904,543 ha, were recorded in a preliminary inventory coordinated by the Department of Science and Technology, of which 572 were natural Scott, 1989. The monsoon forests of the Andamans are dominated by *Pterocarpus dalbergioides* and *Terminalia* spp.

A full list of these species is given in. You have requested a machine translation of selected content from our databases.

### Priorities for conserving global species richness and endemism

The roots demonstrate capacity to fix up to 176 Mg C ha<sup>-1</sup> with average carbon content of 46 percent. In the north-west, India borders on Pakistan; in the north-east, China and Burma; and in the east, Burma.

## **A Review of *Rhinolophus* (Chiroptera: Rhinolophidae) from Myanmar, Including Three Species New to the Country**

Prior to investigation, it was hypothesized that locals will willingly refrain access and make contributions to conservation as they are the primary beneficiary. Gland, Switzerland: IUCN — The World Conservation Union and Nairobi, Kenya: United Nations Environment Programme.

### **The Protected Areas System**

The principal reason for the decrease in numbers is deliberate human predation.
