### **Ethical issues in predictive genetic testing: a public health perspective**

It is the right and responsibility of the individual to determine who shall have access to medical information, particularly results of testing for genetic conditions. If 100 disorders are tested from the same blood sample, it may be difficult to apply the current model of informed consent in which a health care provider gives information about each disorder and the efficacy of each test to the patient in advance of the testing.

### **The Role of Race and Genetics in Health Disparities Research**

Because of the risk of stigma for the newborn, such pretest information should be provided to parents when they are informed about newborn screening. Advances in Political Psychology, 35, 3—42. Neural responses to perceiving suffering in humans and animals.
