Technical Memoranda

Provides policy on suspended sediment filters. For example: In her memorandum in support of her motion to dismiss, Rebecca has many decisions to cite in support of her position.

Memo Writing Examples (PDF)

Within the statement of the facts should be a few sentences concerning the procedural history of the case. Summarizes documentation that describes instrumentation and field methods for collecting sediment data. Transmits report evaluating four dam-break flood-wave models and identifies a modified version of the National Weather Service model as best for several reasons.

Project Technical Memorandum

Manuals and memoranda 2012 This memorandum provides information for practitioners on the calculation of road superelevation appropriate for a vehicle speed and curve radius.

Memo Writing Examples (PDF)

Releases suggested station lists and solicits comments. Announces use of stations in WATSTORE to define a Hydro-Climatic Data Network (HCDN).

Technical memoranda (TSB)

Geological Survey streamflow data set for the United States for the study of climatic variations, 1874-1988. Requests cooperation in supplying hydrologic data collection and management information. Presents the guidelines for sampling and analysis of water-quality constituents associated with solids.

Provides policy on the publication of estimated flows from flow routing, regression equations, and in some cases, rainfall-runoff modeling. Remember that the responses made are meant to be short and simple. Similarly, it is always a good idea to include a brief statement of the facts of the case.

Geometric design

Revises limitations on the publication and distribution of estimated flood-frequency information. Provides errata sheets to replace erroneous air-line and wet-line correction tables in WSP 2175.

Technical memoranda (TSB)

Transmits and discusses report describing new procedures for hydrologic regression and network analysis using generalized least square regression and for extension and improvement of NARI WSP 2178. Additionally, any concurrences or dissents should receive some discussion. Briefs should not be longer than one to two pages long and should be easy to read so that the reader does not have to spend much time understanding the reasoning of the case.
