Autoimmune Disease

Cold agglutinins— An autoantibody found on the surface of red blood cells in certain diseases that can cause the cells to clump at temperatures below 37°C and cause red blood cell lysis. Antiphospholipid Syndrome With antiphospholipid syndrome APS , your immune system makes antibodies that target the cells that line your blood vessels. Philadelphia, PA: Elsevier; 2017:chap 8.

Autoimmune diseases — Johns Hopkins University

Eating high-fat, high-sugar, and highly processed foods is thought to be linked to , which might set off an immune response. Human Anatomy and Physiology, 5th ed. It is only a minority of cases where autoimmunity actually produces damage in the body, producing disease.

Encyclopedia of Medical Immunology

The advantage of enzyme-based test is that an ordinary high quality light microscope may be used for detection; however, extra wash and incubation steps are necessary to produce the color change. Systemic lupus erythematosus SLE Although first described as a skin disease because of the rash it commonly produces, the systemic form, which is most the common, actually affects many organs, including the joints, kidneys, brain, and heart. Lymphatic vessels are thin tubes that spread, like blood vessels, all over the body.

Autoimmune Disease List • AARD

The classic sign of an autoimmune disease is inflammation, which can cause redness, heat, pain and swelling. However, as certain self antigens such as idiotypes form key recognition structures for immunological regulation it is crucial that the immune system retains the ability to recognize these particular self components. Treatments can also help relieve symptoms.
