## -- Economic growth and employment in China

Description: -

- Manpower policy -- China (Peoples Republic of China, 1949-)

Labor supply -- China (Peoples Republic of China, 1949- ).

Cities and towns -- China (Peoples Republic of China, 1949-

).Employment and economic growth in urban China, 1949-1957. --

- Unemployment issues:

- China is one of the largest producers of greenhouse gases due to their recent industrialization. There has been one new law put in place January 2009 that is designed to combat this pollution problem. Compared to most of the other countries studied it has a very high amount of pollution.

- Since today the economy is market based it is possible to have unemployment and a wealth gap. There is no longer a guarantee of employment.
- There is a large wealth gap between the city and rural areas.
- This is also a very apparent difference between the north region and the south regions (south is more developed) in China. This is similar to the regional variations in Mexico and Nigeria.

## Gender Inequality and Economic Growth in Rural China

Is China abolishing the hukou system? Among the largest cities, only Chongqing, nominally the largest prefecture-level city in China, appears too poor for its size, as well as too large spatially. Workers, like Eugenio, move to cities looking for jobs. Banks are state-funded and owned.

## Looking at urbanization through a jobs lens

As shown in the table right , China's urban population growth is higher than that of as well as the world. What will the process of urbanization actually look like? In 2014, several cities generated this kind of data and published them in the China City Statistical Yearbook, specifically the directly-controlled municipalities Beijing, Shanghai, Tianjin, and the provinces Guangxi, Guangdong, and Hainan.

## The 3 Industries Driving China's Economy

This situation likely makes these cities larger than they should be and increases congestion. Each city has a progressively higher level of social, environmental and economic prosperity achieved through increased education, government intervention, and social reform. But these cities will not develop automatically, fully formed and productive.

## How Does Industrialization Lead to Urbanization?

All of these were precursors to banking reforms, which led to perhaps the most important transformations in the Chinese economy in the 20th century. One industry not identified but worthy of note is the Chinese. The annual Taobao Village Summit, where rural entrepreneurs and scholars in China share best practices for rural e-commerce businesses, is seeing an uptick in number of international participants from countries such as Rwanda, Mexico and Malaysia.
