Chemical Exposure and Spill Response Procedure

Ethanol exiting the molecular sieve is over 99 percent pure.

Response Manual for Combating Spills of Floating Hazardous Chemicals

As of January, 2014, the number of ethanol plants rose to 210 in 28 states.

Oilex and HNS Exercise test marine pollution responses (with photos)

At ethanol manufacturing facilities, fire and explosion hazards are present from the time ethanol is first formed through product purification, storage, and transport.

EPA's Response Techniques

Individually, these two types of facilities are accompanied by distinct hazards, but when they are combined, hazards associated with both grain handling and flammable liquid processing, storage, and transport come into play RFA, 2007. Workers involved in maintaining process equipment must be trained in the overview of the process, its hazards, and the procedures applicable to their specific tasks. Specifically, ethanol formed by fermentation of starch-based or cellulosic-based feedstock accounts for nearly all of today's ethanol market, with only minimal amounts currently manufactured via thermochemical production.

OSHA Technical Manual (OTM)

Keep the SDS with the victim. Requires employers to maintain walking and working surfaces free of hazards, including accumulations of combustible dust. Hazardous chemicals or processes should be replaced with less hazardous chemicals or processes when feasible.
