O'Grady has received substantial research funding and is the author of over one hundred papers, and several books. Great strides have been made in individual technologies and control of FMS has been the subject of considerable research, but computerized shop floor control is not nearly as

flexible or integrated as hypothesized in industrial and academic literature.

The design of flexible manufacturing systems

Integration of FMS under different Production Management Approaches such as MRP II and JIT. He is Project Director and Co-Principal Investigator on a major research project funded by the National Science Foundation under the Strategic Manufacturing Initiative. Baudin: Manufacturing Systems Analysis with Application to Production Scheduling, Yourdon Press, 1990.

Flexible Manufacturing Systems

In 1982 he was named by the Society of Manufacturing Engineers as a Young Manufacturing Engineer of the Year. Because of the lack of integration, an FMS must be designed by examining the four phases independently even though the design decisions from each area affect the efficiency of the other areas.
