

# Demand for outdoor recreation.

## Cornell University - Urban and Regional Planning: Leisure and Recreation: Supply & Demand

### 1. The Demand for Outdoor Recreation

Figure 17-1, p.335

- Demand curves for an imaginary public park:
  - Horizontal axis: visitor-days, defined as the total number of day-long visits (two half-day visits make one visitor-day); vertical axis: the entrance price to visit the park
  - There are a series of aggregate demand curves, each pertaining to a different time period (10 years ago, the current period, and 10 years in the future), arrived at by summing the individual demand curves of visitors to the park
  - $q_1$ ,  $q_2$ , and  $q_3$ : numbers of visitor days if entrance fees = 0
  - Population growth, income growth, transportation improvements or drops in the price of gas, and taste and preference toward outdoor recreation shift D to the right

Description: -

- demand for outdoor recreation.
- demand for outdoor recreation.
