Potato

A class of B vitamins involved in red blood cell formation, B6 is found in most foods. It remains an essential crop in Europe , especially northern and eastern Europe , where per capita production is still the highest in the world, but the most rapid expansion over the past few decades has occurred in southern and eastern Asia.

Atyab al

Potatoes usually rank high on the glycemic index GI , making them unsuitable for people with diabetes. Good ground preparation, , , and rolling are always needed, along with a little grace from the weather and a good source of water. Another relative native to this region, , has been used to genetically engineer the potato to resist potato blight.

Potato

In humans, acrylamides have been classified as a possible risk factor for.
