## QUARRY

Assessing sulfur redox state and distribution in abyssal serpentinites using XANES spectroscopy.

## Continent

Control of source fertility on the eruptive activity of Piton de la Fournaise volcano, La Réunion. In Group II the agreement of the different values is not so good, but is still very striking when the fact is taken into account that the two specimens from North Carolina examined by Hillebrand showed unmistakable evidence of slight secondary alteration as did also the specimen from South Carolina, which moreover is from a different locality and is placed with this group only because there are no others with which to compare it. These remains have undergone a partial mineralization, and have been penetrated by the mineral matrix quite extensively.

## Record details

On a bed of trap occurring in the colliery of Birch Hill, near Walsall, in Staffordshire. Herausgegeben mit Unterstützung der Kaiserlichen Akademie der Wissenschaften in Wien aus der Treitl-Stiftung.

## Nepheline Syenite, 270 mesh

BGS Mineral Assessment Reports 101.

**Europe's rare earth element resource potential: An overview of REE metallogenetic provinces and their geodynamic setting**

GiveH a list of the genera and species.
