### Factors influencing uptake, continuation, and discontinuation of oral PrEP among clients at sex worker and MSM facilities in South Africa

The majority of participants 87. With regards to uptake, side effects were cited as a secondary reason for lack of initiation, following not being offered PrEP.

### HIV/AIDS Educational Materials for Consumers

The third past user said she discontinued because she was counseled that if she missed any doses, she would have to reinitiate, which she found too burdensome. Only 15% of past users stated that the side effects were tolerable, and 83% said that the side effects they had experienced had affected daily life as per.

### Factors influencing uptake, continuation, and discontinuation of oral PrEP among clients at sex worker and MSM facilities in South Africa

Providers advised them to continue taking oral PrEP and said that the side effects would wear off eventually or suggested changing the timing of daily pill taking.

### Factors influencing uptake, continuation, and discontinuation of oral PrEP among clients at sex worker and MSM facilities in South Africa

Attitudes and program preferences of African-American urban young adults about pre-exposure prophylaxis PrEP.

### HIV/AIDS Educational Materials for Consumers

In surveys at SW sites, over 75% of participants said that they used a condom the last time they had sex with a client; these proportions were

similar among current 80.

#### **HIV/AIDS Educational Materials for Consumers**

This study examines factors related to PrEP initiation, continuation, and discontinuation at facilities providing services to sex workers and MSM during the national PrEP rollout.
