

# Gogebic iron range - a sample of the northern margin of the Penokean fold and thrust belt

U.S. Dept. of Interior, U.S. Geological Survey - The Gogebic Iron Range : William F Cannon : 9781287031192

Description: -

Orogenic belts -- Gogebic Range Region (Mich. and Wis.)  
Folds (Geology) -- Gogebic Range Region (Mich. and Wis.)  
Geology -- Gogebic Range Region (Mich. and Wis.)  
Geology, Stratigraphic -- Proterozoic Gogebic iron range - a sample of the northern margin of the Penokean fold and thrust belt

Professional paper -- 1730 Gogebic iron range - a sample of the northern margin of the Penokean fold and thrust belt

Notes: Includes bibliographical references.

## Figure 13 from The Gogebic Iron Range

In both the eastern and western parts of the iron range, abrupt facies changes mark a passage into a more tectonically and volcanically active belt. Deposition occurred in a relatively stable tectonic setting, at least until the deposition of the Tyler Formation. The iron range forms a broad, gently southward-opening arc where the central part of the range exposes rocks that were deposited somewhat north of the eastern and western parts.

The test conducted with the acid let the Neumann figures be revealed the Neumann figures which confirm this metallic block as being a ferrous meteorite or a siderite of the Hexaedrites class.

## Gogebic Iron Range

The eastern and western parts of the range, in contrast, exhibit a depositional and deformational style typical of parts closer to the interior of the orogen. Together, these features make the Gogebic iron range a unique area in which to observe 1 the lateral transition from deposition on a stable platform to deposition in a tectonically and volcanically active region, and 2 the transition from essentially undeformed Paleoproterozoic strata to their folded and faulted equivalents. Following the example of tribes in Alaska, the Chippewa Federation sent a letter to EPA Administrator McCarthy and Regional Administrator Hedman on June 18th.
