## METHODS IN CLIMATOLOGY

Climatology is a science used to describe the climate with respect to its averages and extremes.

### Methods in Climatology

This book should make the student acquainted with a number of methods of mathematical statistics and theory of probability applicable at once to climatological problems. Quantitative Methods of Analysis The typical questions asked by the climatologist are how conditions change over time, what is the spatial pattern of climate, and how one location connects with another or with factors regulating change.

### Methods and problems in historical climatology

The Cape region of South Africa was settled by Europeans considerably earlier, so that some observations extend back to the late 17th century.

### Methods and problems in historical climatology

In West and equatorial Africa, sediment cores from lakes have provided a wealth of information on precipitation. Perhaps the first works to synthesize material for large sectors of the continent were those of Pejml, Plote, and Nicholson.
