## Destroying the Environment: Government Mismanagement of our Natural Resources

It involves the management of all components of the , both living and non-living , and the relationships among all living and their. The federal government and industry are developing standards, regulations, and procedures to reduce the potential for accidents and spills and to clean up spills when they occur. For example, economic paradigms based on neoclassical models of closed economic systems are primarily concerned with resource scarcity, and thus prescribe legalizing the environment as an economic externality for an environmental resource management strategy.

## Economic Development vs the Environment

Con: In the 18th and 19th centuries people were largely unaware of the consequences of their industrialization so instead of calling the developed world hypocrites you could say they were canaries in the coal mine.

## Destroying the Environment: Government Mismanagement of our Natural Resources

It shares a wider approach and stresses out the importance of interdisciplinary assessment. Obviously the world would be better if all nations stuck to strict environmental rules. For example, efficient new steelworks use much less water, raw materials and power, while producing much less pollution than traditional factories.

## Current Environment Problems That Our World Is Facing

Today's economic paradigms do not protect the natural environment, yet they deepen human dependency on biodiversity and ecosystem services. Pro: It is true that most of the developed world today were or still are major polluters for a long time, and that they are being hypocritical to tell the developing world to do as they say not as they do.

## 20 Gut

Non-renewable resources are those that exist in nature in a limited way because their regeneration involves the passage of many years, such as

minerals and fossil fuels — oil, natural gas and coal —. Who's the greatest polluter of all? Some of the world's largest and most profitable corporations are shifting to sustainable environmental resource management: Ford, Toyota, BMW, Honda, Shell, Du Port, Sta toil, Swiss Re, Hewlett-Packard, and Unilever, among others.
