## The Wildlife of Johnstone Strait

In adult males, the paddle-shaped pectoral fins and tail flukes are longer and broader and the fluke tips curl downward Bigg et al. They are the smallest baleen whale in the North Pacific.

## A Second Life For Whales

Other threats such as mortality in fishing gear have posed a threat to cetacean populations in other areas, and could potentially impact Resident Killer Whales. Northern Resident Killer Whale critical habitat: Western Dixon Entrance Critical habitat for Northern Resident Killer Whales in western Dixon Entrance includes most of the coastal waters off the north side of Graham Island.

## Michael Bigg

Northern resident killer whales in the Johnstone Strait area spend the majority of time foraging for salmon, primarily chinook, during July-September and chum in October Ford 1989, Ford et al. Culture Culture refers to a body of information and behavioural traits that are transmitted within and between generations by social learning. Then, there's time to relax around the cozy campfire and listen to your guides tell stories and narrate local legends.

## Protect the Schmidt Creek Watershed

Population viability analyses based on sex-structured models and high-quality demographic data predicted a 1.

## Observing Whales from Land

In 2014, Northern Resident Killer Whale I103 became severely entangled in a gill net and despite being released quickly, died the following winter.

## Southern Resident Killer Whales

But the world these whales inhabit is quickly changing, and the old rules no longer apply.
