Cancer, Patients, Survivors

Key themes are identified and triangulated with previous research to confirm and expand our current understanding of the impact and consequences of mental health care in psychiatric hospital. Furthermore, for some service users, staff were instrumental in provoking situations that

Filesize: 4.15 MB

made violence more likely.

Communication in nurse

With the adoption of zero tolerance policies across hospital departments, much of the focus has been on patient perpetrated violence. The results suggested that nurse-patient communication studies need to extend to other healthcare contexts. These can help you maintain some strength.

Toward the End of Life: What You and Your Family Can Expect

Open Communication Coping with cancer is difficult. Staff's fear of patients' behaviour resulted in their use of coercive measures.

Interviewees give a further reason for the attribution of trust to staff in the description of trusted staff as professionals.

What they understand will vary depending on their age and maturity.

Cancer, Patients, Survivors

Although this remains a concern of patients, in this study it was clear from these interviews, and those of Kumar et al.

Cancer, Patients, Survivors

One incident described a staff decision not to treat a patient in considerable distress.
