It is noteworthy that the foretop radar of the armoured ships later reclassified as heavy cruisers were provided with the best positioning of any German heavy units. As contemporary literature on Second World War German warships includes a great number of excellent pictorials see Bibliography , this article does not use photographs to illustrate all the variations in radar equipment in Kriegsmarine vessels but concentrates on

giving general coverage by means of drawings so that the reader may try to identify the different system in his own personal library by using these as a guide.
