## Sikhote Alin « Jarkko Kettunen Meteorite Collection

The strewnfield measures 1,75 x 1,0 km. An estimated 70 tonnes metric tons of material survived the fiery passage through the atmosphere and reached the Earth. There are direct buses currently two per day, according to the web from Vladivostok or you could take the train from Vladivostok to Novochuguevka and then a minibus from there.

## Possible Meteorite Fragments from 1908 Tunguska Explosion Found

The largest fragment, weighing over 3,800 pounds, being pulled from its crater in 1950 now on display at the Fersman Mineralogical Museum. The size of the original mass was around 3-4 meters wide before entering the atmosphere. The Main mass of Sikhote-Alin meteorite, weight 1745 kg Specimen Description: The specimen is a complete piece and weight 17 240g.

## Sikhote Alin « Jarkko Kettunen Meteorite Collection

The biggest founded completed piece weight 1745 kg and the second and third 500 and 450 kg.

## Sikhote Alin (IIAB)

Dimensions: L 25mm W 8mm H 14mm ID : SikhoteAlin21-1 Weight : 21.

## Sikhote

Several fragments had hit the trees of the dense taiga forest and had either broken them or damaged them. The largest unbroken individual specimen, was 1,745 kg, was first discovered in 1950 in a rather small pit. However, arranging for a local guide once you get to Terney would be extremely problematic without Russian skills.

## Sikhote feature

The photos show representative individuals as collected by the first expeditions reaching ground zero in mid 1947. Thanks, Matt Both the Russian

Far East and the same month? But he does say the stony fragments do not rule out a comet since the nucleus could easily contain rock fragments.

### **Sikhote Alin Meteorite**

This wasn't enough for me however.
