### Evidence-based treatment of systemic vasculitis

Unfortunately, experience with these drugs in vasculitis is usually delayed until they are licensed for a particular indication, typically transplantation or rheumatoid arthritis. PMID: 32033937 Free PMC article.

### Understanding Evidence

Corticosteroids plus pulse cyclophosphamide and plasma exchanges versus corticosteroids plus pulse cyclophosphamide alone in the treatment of polyarteritis nodosa and Churg—Strauss syndrome patients with factors predicting poor prognosis.

### Evidence-based treatment of systemic vasculitis

The CYCAZAREM trial revealed an adverse effect frequency of 1. Classification Diagnosis This review will focus on the primary systemic vasculitides which are distinct from those related to infection, drugs, cancer or other systemic disorders, such as rheumatoid arthritis.

### JAK Inhibitors in Rheumatoid Arthritis: An Evidence

Tofacitinib, baricitinib and upadacitinib are the first 3 JAK inhibitors to become commercially available in the field and are the core focus of this review.

### An evidence

Adverse effects related to methotrexate included pneumonitis, although this can be difficult to diagnose in a patient with pulmonary Wegener's granulomatosis, hepatotoxicity and myelosuppression, but these events were reversible. Each chapter includes non-drug therapy, drug therapy, and consumer evidence-based summaries. This is a major textbook of evidence-based medicine applied to the musculoskeletal disorders.

### Evidence-based treatment of systemic vasculitis

I highly recommend checking out the associated graphs - just take a quick peek at some point while listening. Great paper to discuss this week - one that may be too good to believe? The advent of newer immunosuppressives and biological agents targeting specific immune components offers exciting possibilities for the vasculitis specialist.

### **Understanding Evidence**

This is a major textbook of evidence-based medicine applied to the musculoskeletal disorders.

### **The Evidence Based Rheumatology Podcast**

Current treatment is toxic and contributes to morbidity and mortality. Collectively these data can guide clinicians to formulate appropriate preventive strategies and patient-tailored monitoring plans during pre-pregnancy counselling of SLE patients. As well as the need for less toxic therapies overall, there is a more urgent requirement for the elderly to be regarded as a separate subgroup and appropriate protocols designed to offer a more favourable balance with less toxicity.
