Besides being part of the PE header, it also appears at the very beginning of the COFF OBJs produced by the Microsoft Win32 compilers.

## **CompuServe**

To find the real offset, you need to first look up the alignment unit size in the NE header and convert it to a sector size typically 16 or 512 bytes. Alternate models can provide the same benefits of connected devices without the societal and personal costs. The other thing to remember is that section names that are out of the ordinary can often give a deeper insight into the purpose and implementation of a particular PE file.
