**Isolation and efficacy of the endophytic fungus, Beauveria bassiana (Bals.) Vuillemin on grapevine aphid, Aphis illinoiensis Shimer (Hemiptera: Aphididae) under laboratory conditions**

The highest peak was by mid-February. Biology of the camphor scale and a method for predicting the time of appearance of stages in the field. Wingless immature forms are rather long-bodied and paler than adults, with a dark spinal stripe and a light dusting of whitish-grey wax.

**Studies on the biology of some root aphids in Egypt (Hemiptera)**

The first appeared in the.

**Effectiveness of ladybirds as biological control agents: Patterns and processes**

Consequently, not all injury causes damage, and damage threshold, or boundary, defines the level of injury where damage occurs Bardner and Fletcher 1974 and Pedigo et al. Parasite populations can be monitored by assessing the proportion of aphid mummies relative to unparasitized aphids.

**Isolation and efficacy of the endophytic fungus, Beauveria bassiana (Bals.) Vuillemin on grapevine aphid, Aphis illinoiensis Shimer (Hemiptera: Aphididae) under laboratory conditions**

Parasites of potato-infesting aphids in north-eastern Maine. No adverse effects of transgenic- Bt tomato plants expressing the toxin Cry3Bb against Coleoptera were found on the biology of M.

**Isolation and efficacy of the endophytic fungus, Beauveria bassiana (Bals.) Vuillemin on grapevine aphid, Aphis illinoiensis Shimer (Hemiptera: Aphididae) under laboratory conditions**

Studies on the aphid fauna of Sinai Governorates.

## **Hemiptera**

Journal of Chemical Ecology, 30 4 :819-834. The obtained 5 isolates were DNA sequenced for ITS region.

## **Hemiptera**

In some groups of Hemiptera, there are variations of winged, short-winged, and wingless forms within a single species. Molecular Fingerprinting of Certain Cereal Aphids in Egypt Hemiptera: Sternorrhyncha: Aphididae Using RAPD and ISSRs Markers. Characteristics of the open empty mummies of the cabbage aphid *Brevicoryne brassicae* L.
