Magnetometer Survey

An infinite number of possible sources can produce a given anomaly, giving rise to the term ambiguity. This shows that there is a continuous strata deposited here. By comparing it with the GPR data we are sure that there is an anomaly present.

WCZ

Gravity survey is the essential survey method designed to assess deposits, variance in stone densities, structural survey of the research area, thickness of sediment layer, and identification of the depth of basement.

Mineral Exploration Applications

By measuring this precession frequency, the total intensity of the field can be determined.

Geophysics Labs

USES OF MAGNETOMETER: SENSOR TYPE Fused quartz using electrostatic nulling READING RESOLUTION 1microGal POWER CONSUMPTION 4. In order to locate a water supply tube-well that can serve the congregation of thousands of worshippers patronizing the camp on weekly basis, a major geophysical mapping of the camp was carried out.
