Hua luo hua kai / Hua Yan zhu

This is the background against which Hua set to work as a young man, and it is probably fair to say that it is for his contributions in this area that Hua's name will remain best remembered: notably for his seminal work on the estimation of trigonometric sums, singly or on average. Hua wrote several papers with on the solution of equations in finite fields and with on automorphisms of classical groups. .

Hua kai hua luo

At Princeton, Hua worked on , functions of , and. His argument rested on the deployment of intricate algebraic identities and yielded rather poor admissible values of s k s k s k. In July 1952 the Mathematical Institute of the Academia Sinica came into being, with Hua as its first director.

HUA KAI, General Cargo Ship

During this time he studied 's seminal method of estimating trigonometric sums and reformulated it, even in sharper form, in what is now known universally as 's mean value theorem. Much of his algebraic work later provided the basis for the monograph Classical Groups by Wan Zhe Xian and Hua published by the Shanghai Scientific Press in Chinese in 1963. The family was poor throughout Hua's formative years; in addition, he was a frail child afflicted by a succession of illnesses, culminating in typhoid fever that caused paralysis of his left leg; this impeded his movement quite severely for the rest of his life.

Pinyin Lyrics Wu Xuan Hua (吳軒華)

At this time Quing Hua University was the leading Chinese institution of higher education, and its faculty was in the forefront of the endeavour to bring the country's mathematics and science abreast of knowledge in the West, a formidable task after several hundred years of stagnation. In the following year Hua showed in a short note in the same journal that a certain 1926 paper claiming to have solved the quintic was fundamentally flawed.
