This invention may, however, be embodied in many different forms and should not be construed as limited to the embodiments set forth herein; rather, these embodiments are provided so that this disclosure will be thorough and complete, and will fully convey the scope of the invention to those skilled in the art. Thus, statistical modeling has been the main thrust in this direction in layers, where the recognition at several intermediate levels is conducted and connected.

Walking: A Grounded Theory of Social Engagement and Experience

Nationally, research is massively mobilising, including in. The lack of quality standards of the construction method and the incompliance of quality of work in general according to the technical specification of each construction work are some of the factors associated with construction project failure.

Top 3 Factors Affecting Individual Behaviour

Results For the analysis of the data, we developed a structural equations model including the dimensions of each construct. The results are obtained from decomposition result or problem structure division in each hierarchy, then determining relative importance scale from each element based on pairwise comparison of each element in hierarchy, further calculating priority synthesis by doing multiplication process between local priority with criteria on hierarchy. It is clear we need better provision of both private and public space.
